

**Draft List of Eligible Low Emission and Energy-Efficient  
Vehicles using the Hybrid-to-Gasoline Vehicle Comparison  
Methodology as of February 13, 2013**

This draft list is based on the most recent certification data available to EPA through model year 2013 and was developed using the proposed gasoline-to-hybrid comparison methodology. This draft list could change depending on the methodology finalized by EPA during the rulemaking process. It is also important to note that an individual state's list may differ from these lists, since states have the option to increase the stringency of the designated fuel economy percent increase values. States do not have the option to increase the emission standard stringency.

Lastly, in order for a vehicle owner to determine if their particular vehicle would qualify, it is necessary to know the EPA engine family name (also referred to as "test group name"), which is the unique EPA identifier pointing to the manufacturer's emission certification for that vehicle. This identifier is required to be printed on the emission information label located under the hood of every vehicle.
