**Project Work Suspended** - The 10th West / SR 252 reconstruction project is one of nearly 50 transportation projects across the state that has been suspended by UDOT in response to decreasing revenue conditions. The suspension will continue indefinitely, pending the outcome of the upcoming legislative session. Although work on the 10th West project will cease during the suspension, the public, area residents and key project stakeholders may still submit comments or discuss the project with UDOT officials via the contact information listed at left.

**Project Status** - At the time of the suspension, the project team had been working to identify potential changes to the concept plan in response to comments received during the last round of public meetings in October.

**Primary Issues and Design Updates** - The key issues expressed by meeting participants centered on the desire for corridor features that decrease traffic impacts to the residential area and further enhance pedestrian safety in the area of 10th West. The project team is also evaluating design options that would visually distinguish the neighborhood area from the commercial area with the intention of improving safety for both pedestrians and vehicles. Updated plans and additional information will be presented to the public at such time as the project resumes

**Western Bypass** - In response to questions from the public, the project team is also gathering additional information from the regional transportation plan that will provide more explanation regarding the need for improvements to 10th West along with a future roadway corridor further west. .

**Thank You** - The project team expresses appreciation to everyone who has participated thus far in the planning and design process. Your input is critical to developing the best design solution for improvements to 10th West.
