Attendees:
- Reed Soper – UDOT Mountain View Corridor Project Team
- Cameron Cova – Breathe Utah
- Kathy Van Dame – Wasatch Clean Air Coalition
- Bo Call - Air Monitoring Section Manager, Division of Air Quality
- Lee Logston – Planner, West Valley City
- Tina Bartholomew – Utah Transit Authority
- Linda Hansen - PTA
- Paul Roberts – Sonoma Technology, Inc.
- Andy Neff – Langdon Group (facilitator)
- Madison Sehlke – Langdon Group (co-facilitator)

Final Report and Monitoring Results
- Paul has revised the classroom report in some areas to update the accuracy.
- Results show existing filters at the schools are removing about 70-80% of the PM2.5 and 20% of the BC, which is the biggest health concern for students.
- Improved filtration is expected to improve health for students indoors.

Granite School District Board Presentation Schedule
- It’s critical to receive GSD board approval of the mitigation recommendations by the end of the year to stay on track to install the measures by next summer.
- Paul expects to provide the DRAFT presentation to the AWG for review between Nov. 7-11
- All AWG members who are available would like to meet Nov. 18 with Don Adams, GSD Superintendent and any other administrative staff they recommend. The purpose would be to share information and address any comments prior to presenting to the GSD board. Don Adams had requested this meeting in coordination with Reed earlier this year. Paul will participate in this meeting remotely and provide a webinar. About an hour is needed for this meeting.
- Following the GSD staff administrative meeting, any comments will be addressed and the presentation will be finalized.
- The AWG would like to tentatively present to the GSD board at their regular meeting on Dec. 2. The presentation will be electronically submitted to the board for their preliminary review 7-10 days prior to the presentation (tentatively by Nov. 25).

Board Presentation Content
- Group feels at least 30 minutes are needed to adequately make the presentation to the board.
- Cameron will take about 5-7 minutes to present the AWG history, purpose and process (Cameron and Paul will work together on this content over the next few weeks.)
- Paul will take about 23-25 minutes to present air quality monitoring results and recommended mitigation approach.
- Recommended mitigation measures are the culmination of the process. The presentation will educate the board on how the recommendations were made.
• Tone of the presentation is important. The focus will be on educating the board on the problem, why proposals are being made and the recommendations.
• After an agreement is reached with GSD, the AWG will continue to stay connected and oversee the funds programmed through the MVC ROD. This will be the case even if GSD decides to take a different path.

**ACTION ITEMS**
• Provide DRAFT GSD presentation to the AWG for review between Nov. 7-11 (Paul)
• Schedule Nov. 18 presentation with Don Adams, GSD Superintendent and any other staff they would like to invite. Also try to tentatively schedule the board presentation for Dec. 2, provided all goes smoothly. (Andy)
