

BLUFF STREET PEDESTRIAN TUNNEL

The Bluff Street Pedestrian Tunnel is a new Active Transportation project being developed by UDOT in partnership with the City of St. George. The project will install a pedestrian/bike tunnel under Bluff Street between the I-15 Southbound ramps and the Main Street/Blackridge Drive intersection. It will connect the east and west portions of the Hilton Drive Trail through this area and allow users to safely cross Bluff Street through the tunnel and avoid the need to cross at the busy Main Street traffic signal.

The trail will be 10 feet wide, while the tunnel will be 16 feet wide and 10 feet tall, similar to the recent pedestrian/bike tunnel installed under I-15 at 400 South near Dixie State University. The tunnel will also be lighted to enhance safety and visibility. Construction is slated to begin summer 2021 and be complete before the end of the year.
